I recently upgraded from Office 2011 for Mac to Office 365 2016 for Mac I use slide timing with Powerpoint for praise music at the church for years now with Office Powerpoint 2011 with no problems.. Office 365 for Mac now lets you insert and rotate 3D models in Word, Excel, After installing the latest versions of Word, Excel and Powerpoint for Mac, Mac.. After upgrading, I noticed that the same slide presentations I have used in 2011 when run in 2016 version experince a timing delay.
